

Introduction

This study analyzes, from a critical and intersectional perspective, how public policies on educational inclusion influence the academic and scientific trajectories of Indigenous women. It aims to generate evidence that contributes to reducing the inequalities they face within higher education and research contexts.

Public Policies and the Inclusion of Indigenous Women in Mexico: A Critical and Intersectional Analysis of Their Trajectories in Graduate Studies and Research

Research Objectives

- ✓ To analyze the impact of educational public policies on the access and persistence of Indigenous women in graduate studies and their incorporation as researchers in Mexico.
- ✓ To examine the influence of educational public policies on the development of Indigenous communities.
- ✓ To identify the main structural, social, and cultural barriers that Indigenous women face in their academic and professional development as researchers.
- ✓ To propose recommendations based on the identified needs of Indigenous women that may serve as the foundation for reformulating or strengthening public policies and/or institutional programs aimed at supporting this sector.

Research Question

How do national educational policies impact the academic and professional trajectories of Indigenous women in graduate studies?

Are governmental actions and programs effective and relevant in improving the academic and professional conditions of Indigenous women?

Methods

Research Design

Mixed-method approach combining quantitative and qualitative data.

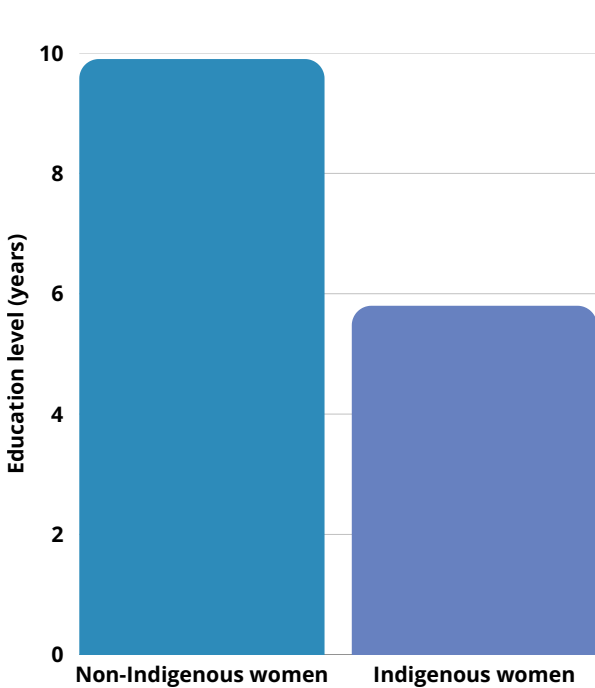

The quantitative component involves a documentary review and statistical database analysis.

The qualitative component focuses on examining the experiences and trajectories of Indigenous women who have accessed graduate programs and seek to establish themselves—or have already established themselves—as researchers.

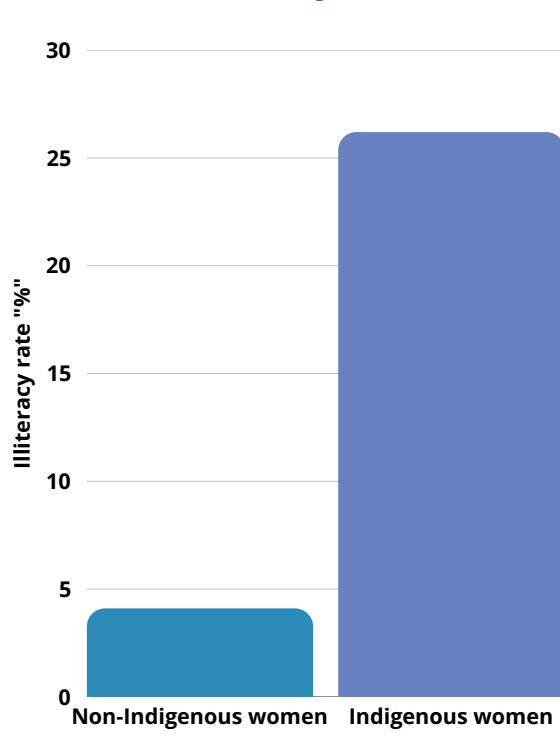

Combining both approaches will allow for the comparison of findings and the identification of relationships between the outcomes of public policies and the lived experiences of their target population.

Justification

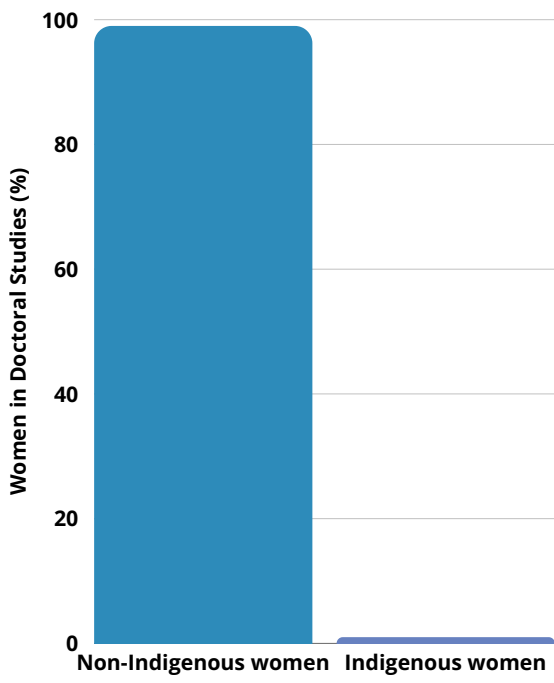

Education levels of Indigenous women

Illiteracy rate

Indigenous women with a doctorate represent only 0.037%

Theoretical Framework

• Intersectionality

There are differences related to class, caste, race, color, ethnicity, religion, national origin, and sexual orientation that shape how gender discrimination is experienced. These factors expose specific groups of women to unique and disproportionate vulnerabilities compared to others (Crenshaw, 2000, as cited in La Barbera, 2017).

• Critical Theory

According to this perspective, “policies must be formulated in connection with the realities upon which they act; without falling into particularism, public policies should respond to the characteristics of the contexts from which they emerge and for which they are designed” (p. 96).

• Development

Based on Sen’s (2000, p. 15) notion of development as “a process of expanding the real freedoms that people enjoy.”

Conclusion

- ✓ This research seeks to provide original empirical evidence on the academic trajectories of Indigenous women and to generate recommendations aimed at reformulating or strengthening public policies that promote their inclusion and participation in higher education and research.
